SDS Data Management

Providing high quality Sourcing, Indexing and Archiving of Safety Data Sheets

With the advent of the Globally Harmonized System of Classification and Labeling of Chemicals (GHS), EHS managers often struggle to keep current with regionally specific regulatory changes in Safety Data Sheets (SDSs).

Sphera's extensive experience in SDS management eases the burden from EHS managers and provides high quality services consisting of sourcing, indexing and archiving of SDSs in multiple languages.

Sphera manages revision currency gaps between the Client's database and the chemical manufacturers' data by proactively contacting manufacturers to acquire the most current SDS updates for chemicals in use at global facilities.

Metadata fields are indexed by our knowledgeable team, using a precise and consistent approach, to deliver valuable data to our software. This solution provides EHS managers the tools to manage chemicals, create reports and comply with regulations.

An annual SDS Management subscription service provides the freedom to submit SDSs for inclusion in the database as new chemicals are received onsite throughout the year, avoiding fluctuating monthly processing fees.

Sourcing
Each Client's SDS database is carefully reviewed; then manufacturers are contacted to acquire the most current data sheets in language and region-specific formats. Clients receive detailed reports showing the results of the contacts for every product.

Indexing
Metadata fields including ingredients, physical data and hazard ratings/classifications per regional jurisdiction are indexed following strict, consistent procedures. This data allows Clients to use the powerful reporting, list matching and chemical inventory capabilities of the Sphera SDS management software.

Custom data fields can easily be added to the indexing set. Following delivery of the data to the management software, Clients receive email notification of the availability of the data.

Archiving
Older SDS versions are archived and custom data can be automatically rolled to the updated SDS. Client-specific archives are maintained in secure software, available for review at any time.

Empowering Chemical Management from End-to-End

Material Request & Approval	Chemical Inventory	Secondary Labelling	Regulatory Reporting	Document Management – Vendor and Authored SDS
