

An aerial photograph showing a dense, lush green tropical forest bordering a clear, turquoise body of water. A small wooden pier or dock is visible at the water's edge. A semi-transparent blue banner is overlaid on the image, containing the title text.

Sustainability Reporting and Management

“We selected Sphera (formerly thinkstep) and their software based on its appeal as a total solution. The strong technical features enable fast data collection and reporting as well as benchmarking of our international sites. The intuitive user interface combined with the expertise of thinkstep professionals is an ideal combination.”

Lea Maria Kemper
Environmental Sustainability Manager, Beiersdorf

Disclosing high-quality sustainability information takes time and resources

Disclosing sustainability information requires taking a lot of time to collect and analyze data from many different sources. At the same time, there are a multitude of new disclosure standards to track and respond to. Many businesses also lack transparency about their sustainability targets and about the actions they will take to improve performance. All of this makes for a cumbersome and resource-intensive process.

Sustainability Reporting & Management

The Sphera Sustainability Reporting and Management software enables quick sustainability reporting and advanced performance management. Automated data collection, powerful reporting tools and advanced planning features make disclosure and performance management efficient, precise and simple.

Significantly reduce the time spent on data collection and reporting

We enable you to cut time spent on collecting, validating and reporting data. Our customers use SoFi Software to cover all common disclosure standards and ratings like CDP, GRI, SASB, GRESB and DJSI.

Protect your reputation and brand value

Make a strong commitment to sustainability and strengthen your brand against the competition. Share powerful sustainability information more frequently to stakeholders.

Improve risk management

Be prepared to meet future mandatory requirements and to identify today's risks. Identify underperforming sites with our audit and compliance tools.

Improve resource efficiency

Manage and improve sustainability performance and resource efficiency by setting targets and analyzing results.

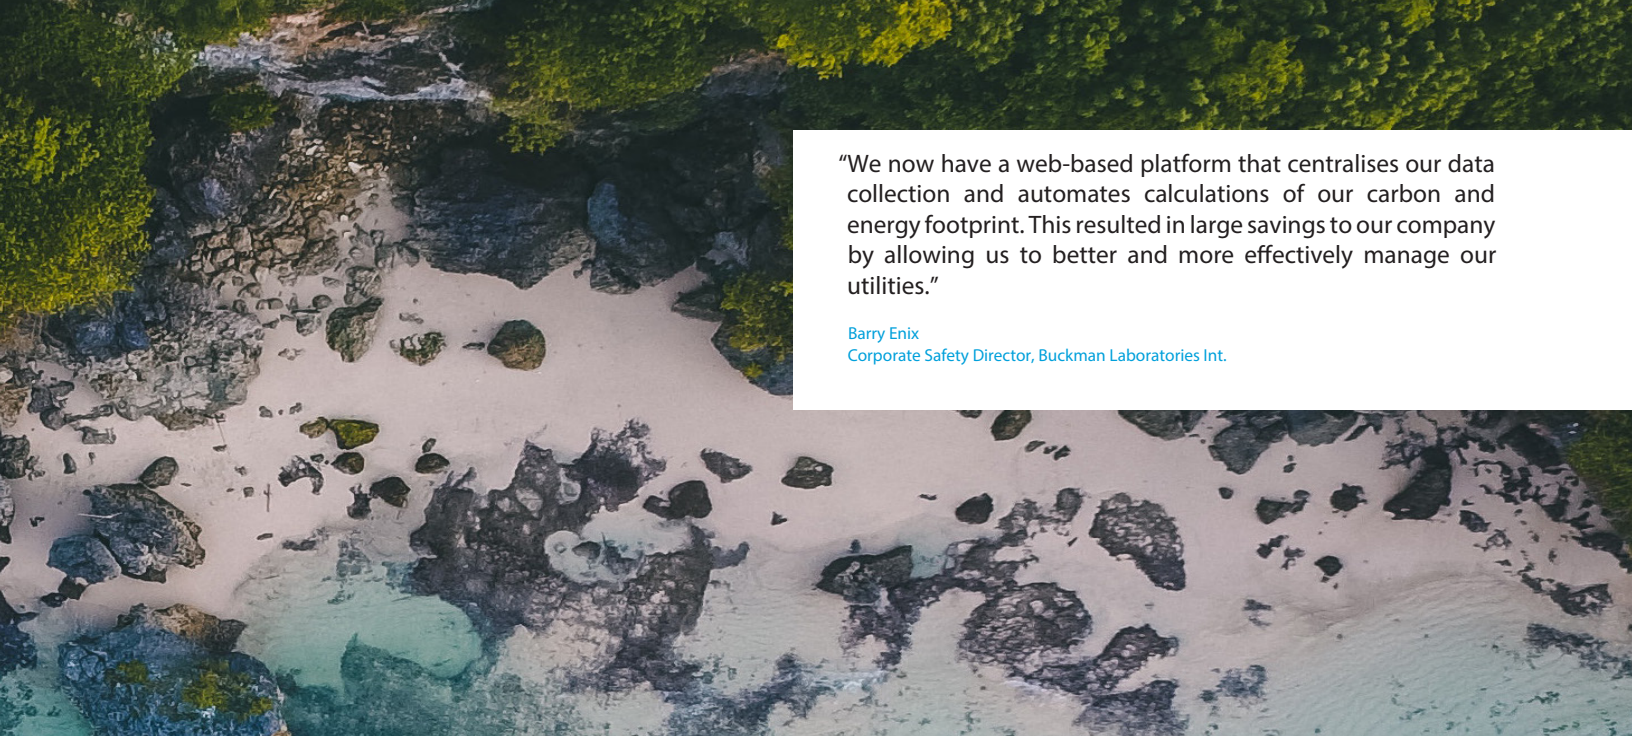

Faster certification and compliance

Speed up voluntary and regulatory compliance reporting with instant data quality checks and transparent audit trails.

PARTNER
ENTERPRISE RESOURCE
PLATFORM

"We now have a web-based platform that centralises our data collection and automates calculations of our carbon and energy footprint. This resulted in large savings to our company by allowing us to better and more effectively manage our utilities."

Barry Enix
Corporate Safety Director, Buckman Laboratories Int.

Data Foundation

Emission Factors

With our extensive emission factor database, you always have the most up-to-date data for reliably calculating your scope 1, 2 and 3 emissions. The standard content includes emission factors published by GHG Protocol, IPCC, IEA, EPA and Defra. In addition, our in-house GaBi Software includes an extensive emission factor database based on more than 25 years of LCA modelling experience. Within that database, we make standard factor sets available and update them annually for your convenience. Upon demand, you can create LCA models to obtain emission factors that fit to your use case (e.g., for specific materials that you purchase).

Sustainability Reporting Frameworks

To lower your reporting burdens, standard templates for CDP, GRI and GRESB reports are available within the SoFi disclosure management section. These are updated annually and certified by our cooperating partners.

Our Benchmark and Best Practice Libraries allow you to compare and improve your sustainability performance by reviewing best-in-class and best-practice projects.

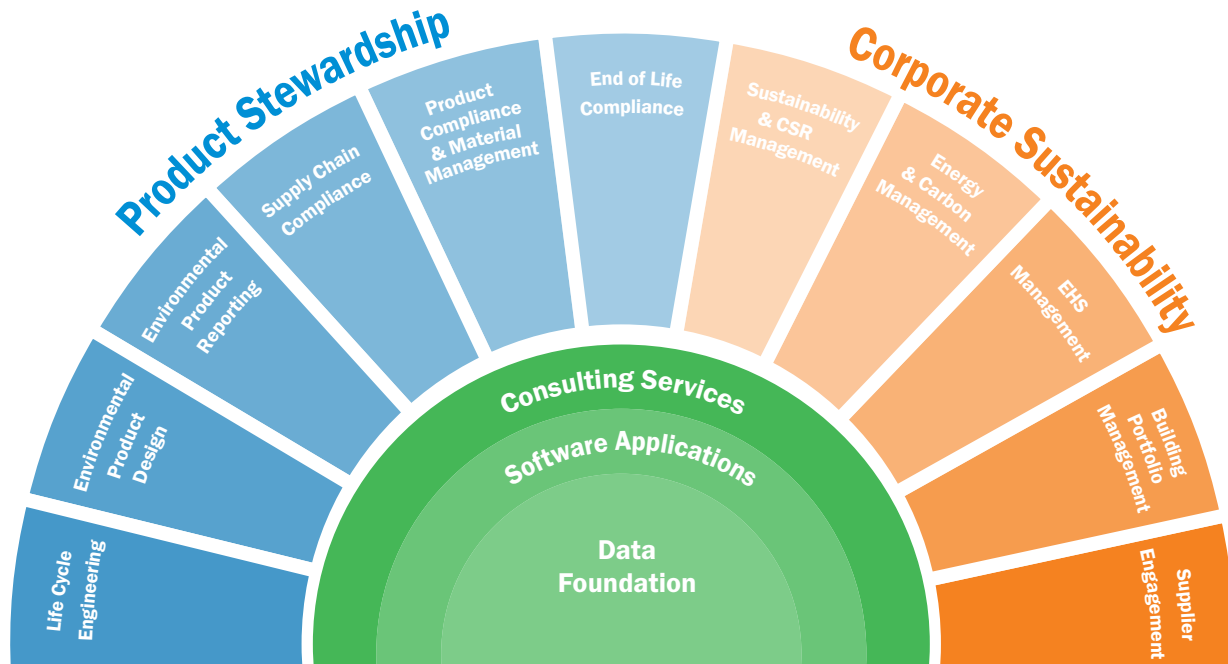

Data Integration

In order to have all relevant data at hand, on time, and in the desired quality, you can set up automated data feeds using data exchange technologies. The SoFi Data Import API enables you to actively deliver files to SoFi making data available near real-time. You can automate less frequent data feeds using standard SFTP capabilities, allowing integration with existing IT systems such as SAP or other enterprise software. You can seamlessly integrate utility data extracted and provided by our partner Urjanet, also using the previously mentioned technologies. Directly taking data from the source will reduce the likelihood of errors and improve your overall data quality.

About SoFi Software

SoFi Software is a web-based solution supporting automated and manual sustainability data collection, aggregation, management and reporting. SoFi aligns with user requirements to flexibly adjust to changing conditions, responding to shifts in internal organizational structures or sustainability priorities, ranging from carbon accounting to sustainability reporting (GRI, CDP, SDGs, SBTs, Scope 3 reporting, etc.) and beyond.

SoFi helps corporations reach sustainability goals by providing a single, centralized source for an organization's sustainability data and by supporting target setting and performance tracking.

For more information visit www.sphera.com

„We were impressed by SoFi's capabilities with respect to breadth of functionality, data processing capabilities and scale of deployments for corporate sustainability management. Clearly this has led to the impressive customer list with some of the largest sustainability software deployments.“

David Metcalfe, CEO Verdantix
