4 TOOLS to Help You Reach the Top of Your Health & Safety Management Maturity Journey

In today's business world, companies are leveraging technology to improve hazard response, save lives, and limit regulatory penalties and fines. At the same time, they need to enhance productivity, reduce operational downtime, lower insurance rates and improve their brand reputation.

78% of businesses continuously monitor safety performance.

70% spot risks regarding Audits and Inspections as the frequency is low and not very effective.

Still, **65%** of organizations are operating with siloed data and piecemeal insights.

Only **37%** of businesses can proactively manage process safety.

Yet, **43%** of businesses lack operational risk visibility.

But how can companies reach the summit of their maturity journey?

By taking the first step.

1 INCIDENT MANAGEMENT FIRST REPORT

Start with your data collection with **Incident Management First Report**, a guided interface that leads users through each step of reporting an incident, near miss or any observation that could be a potential risk.

2 ACTIONS & REMEDIATIONS

Turn the insights from collected data into **Actions & Remediations**: Track actions, accountability and report on progress.

3 MANAGEMENT OF CHANGE

With **Management of Change**, risks and incidents are consistently managed. This leads to improved Safety, compliance and performance across the company.

4 ANALYTICS

Use **Analytics** for powerful reports to uncover potential risks and discover anomalies, so that organizations can make data-driven decisions and improve Safety and performance.

EXPERT TIPS AND GUIDANCE

Basic metrics help establish current performance and record incidents, like injury frequency and severity. This is what organizations need to move from compliant to efficient.

With the increased adoption of technology, the visibility of Safety performance and efficient management increases. More thorough data collection beyond mandatory metrics will help drive operational efficiencies.

Further advanced Health & Safety strategy, tracking leading indicators, and safety training are key. Ensure that insights are turned into procedures across the company and translated into frontline practices.

Businesses must integrate health and safety management into company-wide strategy. Digital tools, such as predictive analytics, help to prioritize efforts based on time and budget while establishing risk visibility across the organization
