

Streamlining Systems to Improve Efficiency

with a comprehensive chemical management solution

OVERVIEW

A leading, multinational footwear and apparel company sought to consolidate their chemical management processes to improve efficiency and transparency across their organization. Prior to implementing Sphera's software in April 2021, they had disparate processes across multiple software solutions. These processes were cumbersome, manual and often created redundant work.

CHALLENGES

Manual material approval process

Difficulty managing safety data sheets and inventory

Lack of documentation leading to repetition of tasks

Confusing communication to internal stakeholders

SOLUTION FAMILY

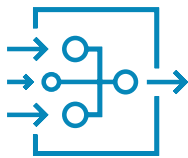

SPHERACLOUD CHEMICAL MANAGEMENT SOFTWARE

The company launched an extensive, industry-wide search for a solution that offered material review capabilities and could improve their safety data sheet management. After reviewing the options, they decided that Sphera's solution met their needs. "Sphera met the flexible needs of the business with the best customer support and most reasonable cost," explained the company's manager of sustainable chemicals management.

RESULTS

"Our team now works with greater documentation, less human glue, more clear results, and smoother transition of projects from innovation through to manufacturing."

— Manager of Sustainable Chemicals Management

Improved process efficiency leading to hundreds of human hours saved

Clearer communication with internal stakeholders

Smooth operations during audits and external reporting

Efficient management of over 6,000 safety data sheets

Is your organization ready to advance its sustainability journey?
